

## Company presentation BIO-PROTECT sa

The Bio-Protect Company is a company specialised in the biotechnology and the biochemistry of buildings.

The management all of a high scientific level, have a degree as Dr in Science, Medical doctor Biologist or engineer, expert in corrosion protection.

Bio-Protect has 2 divisions:

### 1. The Fine Art Division:

This department « **Fine Art Division** » works specific in the conservation and restoration of artwork. The techniques used are multiple and respect always the original work to be treated. Some of the techniques flow out of the expertise applied in the « Building Division ».

An expert certified and registered by the Court of Justice with large experience in antique artwork, has the supervision of this department.

### 2. The Building Division:

#### a) Property Care:

This department is specialised in buildings and especially in the treatment of fungus and other mushroom type, the treatment of capillary moisture (lateral or rising) and the problems of water tightness.

Bio-Protect is also the registered application agent of the products of the Technichem Company for all the hydro proof works of façades and injections in brickwork. The company Bio-Protect offers for all these services a proper scientific background and proposed his clients the most appropriate modern procedures.

The company Bio-Protect is, in the field of the building activities, also working in the conservation and restoration of old buildings. The company proposes his clients a number of products for reinforcement e.g. brickwork, porous bricks, etc. using the latest progress in the field of resins with one or two components.

Complementary the Bio-Protect Company proposes his clients a Bio-Bird system. These content a number of mechanical elements to discourage pigeons on private and public constructions.

**b) Pest Control:**

This department is specialised in the treatment and prevention of damage caused by insects and rodents.

**c) Rust-Anode®:**

This department does the production and the sales / marketing of the product Rust-Anode®, ideal protection by cold galvanisation for new and old steel structures even corroded.

The Rust-Anode® product is especially recommended when a worn out old hot-dip galvanisation has to be locally repaired without dismantling the structure. The original formula was bought for a « bio » solution of corrosion problems.

Rust-Anode® is produced in Belgium since 1954 and is sold throughout Europe including Eastern Europe and Africa.

Rust-Anode® is a one-component with a natural solvent providing a liquid cold galvanisation with the same cathodic protection and the same lifetime expectation as the traditional hot-dip galvanisation.
